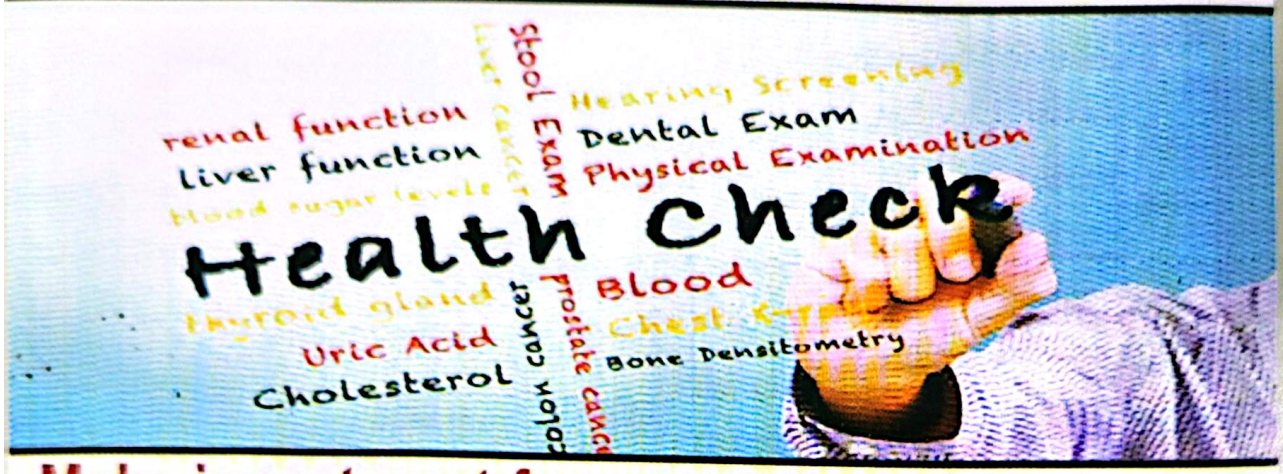
Why health checkup is important at 45yrs ?

Regular **health** exams and tests can help find problems before they start. They also can help find problems early, when your chances for treatment and cure are better. By getting the right **health** services, screening, and treatments, you are taking steps that help your chances for living a longer, healthier life.



Make investment for your overall well-being:

To improve the quality of life and enjoy good health throughout your life, you need to go for regular health check-ups. Spending bucks on regular health check-up is like investing on some funds that will give you good returns in the future, when required. Although your body may be fit today, you cannot be sure that this 'fit and fine' condition will prevail till your last breath. Of course, there is the fear of unknown. No one can tell you about accidents and certain unexpected, unavoidable circumstances. But that does not mean you take your health for granted.

Disease Prevention

How can check-ups better your physical health?

With regular check-ups, you can benefit a lot as described below:

- **You can be careful about your health :**
  Your doctor may warn you about many of your habits based on your age, family history and health.
- **You can transform the unknown into the known:**
  Based on your blood tests and other exam results, your doctor may reveal that you are susceptible to one or two diseases which have apparently no major symptoms.
- **You can detect health issues early:**
  When you get to know about a disease early, chances of you getting better increases.
- **Your doctor can identify risks of several chronic diseases:**
  With regular check-ups, your doctor can identify these risk factors and thus save you from a disease that you could be already suffering from, unknowingly.
- **You can be more productive at work:**
  When you have a healthy body and mind, you can be more productive at work. You need not take leave for seeing doctors time and again
